
SOFTWARE ENGINEERING

PROJECT WORK

ECE651

SPRING 2025

OVERALL STRUCTURE

- **Medium-size software development: game**
- **You are going to work in teams (we form them)**
- **You will receive requirements for 3 evolutions (at least two weeks each)**
- **You should design for change**

TEAMS

Team 1:
- Qiuyi Chen, Weihao Li, Yingyuan Zeng

Team 2:
- Yang Gao, Hailin Xie, Jingwei Zhang

Team 3:
- Shuangxu Jia, Zuocan Ying, Xin Zhang

RULES

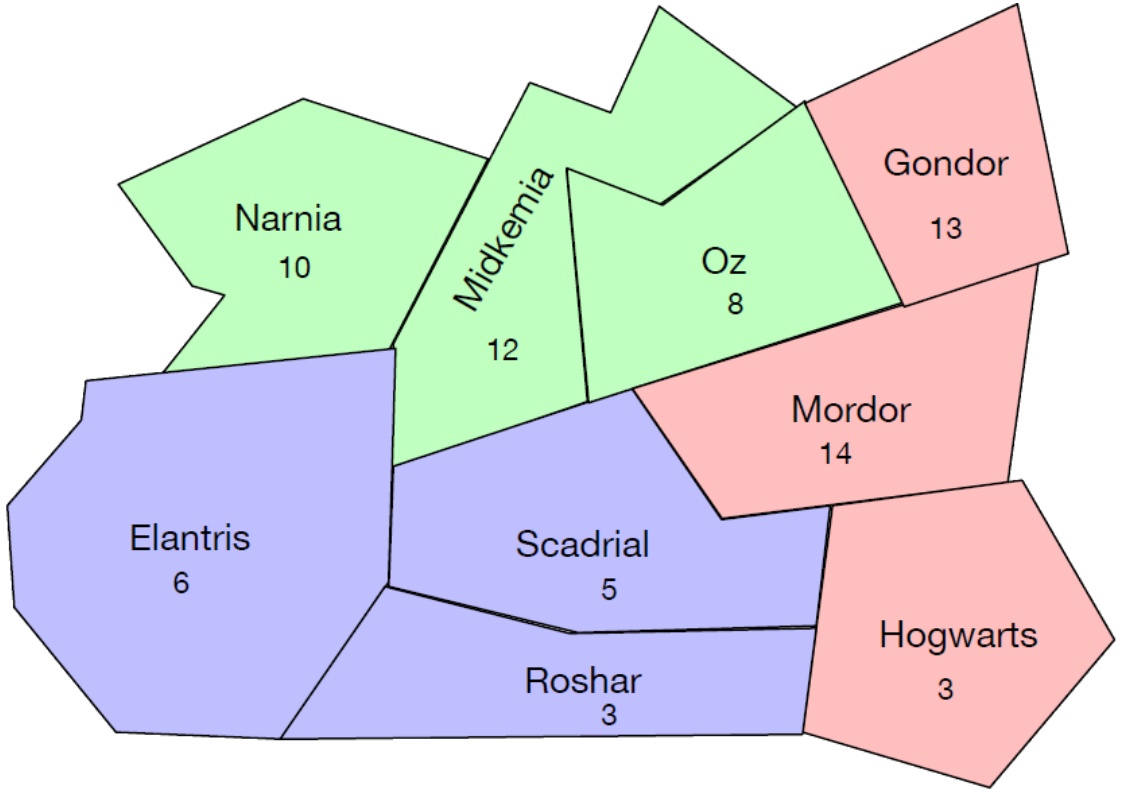
- We expect teams to define a use a software development process use issues, feature branches, pull requests, perform code reviews. Suggestion to start with: use AGILE
- Teams should use UML diagrams to describe their design
  - The UML diagrams will be reviewed and you have the opportunity to revise them before final submission
- We expect your code to be commented, have good variable names, clean formatting, and well-abstracted methods.
  - Teams should define their own coding standard, and ensure it is adhered to.
- Our TAs will play the role of customer representatives. You should communicate with them regularly. You may to invite one of them to sprint reviews.
- If a team is having problems, they should attempt to resolve them yourselves, and if that fails, involve TA and/or professor. Independently on that, each of you has to have a *clear individual contribution* at the end of each evolution.

GRADING FACTORS

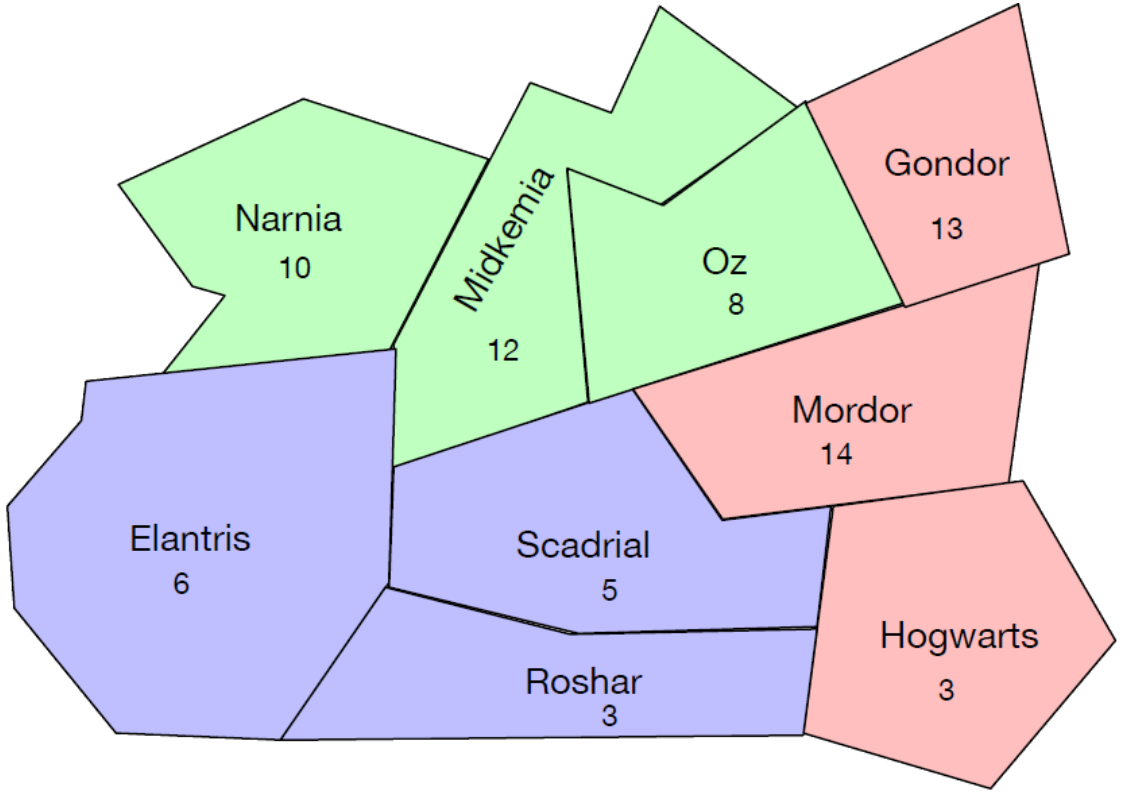
- Functionality
- Design
- Documentation (including UML diagrams)
- Testing
- Other Code Quality Factors like naming, formatting, smells
- Process Issue tracking, CI/CD, Code Reviews, etc.

A GLIMPSE OF THE GAME

- **Board game inspired by the real game RISK, but with different rules.**
- **Many requirements are given, but you will have a lot of flexibility in exactly what you do with many of them.**
- **For example, in EVO 1, we specify that you have to develop a text-based client and a server.**
- **However, we are not going to tell you exactly the messages to print, prompts to make, how to ask the user to enter input.**
  - **All up to you, as long as what you do is reasonable and usable**



THREE INCREMENTS OR EVOLUTIONS

- EVO1: from **MARCH 3** to **MARCH 24 (10/100)**
- EVO2: from **MARCH 24** to **APRIL 7 (10/100)**
- EVO3: from **APRIL 7** to **APRIL 21 (15/100)**


- Requirements assigned at the start of each evolution
